自我介绍

2020年毕业于同济大学，后赴美国罗德岛设计学院攻读硕士学位，同时于布朗大学学习 计算机课程。在校期间，探索人机交互、计算设计、动力学模拟等方向，成绩优异，并在国内外 获得多项学科奖项。毕业后，顺利就职于顶尖规划设计公司 Sasaki规划事务所 波士顿总部研发部门，负责 Web 前后端生态架构开发，数据结构与算法优化等。具备极强的学习自驱力与跨学科整合能力，做事谨慎细致，沟通耐心友善，在学习和工作中均深受同事信任。

教育背景

罗德岛设计学院

设计学硕士 罗德岛 美国

2021.07 - 2023.06

布朗大学

计算机科学 跨校选课 罗德岛 美国

同济大学

建筑学学士 德语强化班 上海

2014.09 - 2020.06

上海七宝中学

高中 上海

2011.09 - 2014.06

技能

AI 工程

Agent开发(Harness) 提示词工程 RAG

PyTorch LoRA 微调

Web 前端工程化

HTML CSS/SCSS JavaScript/TypeScript

React/ReactNative Node.js

Jest / Chromatic / GitHub CI/CD

Web 后端与数据库

Go Python/FastAPI Node.js/Nest.js GraphQL

RESTAPI

Firebase Google_Cloud

PostgreSQL MongoDB Chroma向量

游戏与 3D 空间设计开发

Figma / Adobe XD / PS / AI / ID / PR

Unity C# / C++ WASM cuda / Rhino GH

AI 工具

Codex / GitHub Copilot / ComfyUI

语言

汉语(母语) 英语(流利 专业交流/文献阅读)

德语(中级) 法语(中级)

职业经历

软件工程师 Web全栈

美国SASAKI规划事务所

2023.11 - 2025.11 波士顿 全职 / 2026.1 - 至今 远程

在 Dashi 多客户网站平台升级中，落地客户数据接入、站点配置与云端服务相关模块，将原静态前端站点迭代为可复用的全栈应用；完善核心库维护与自动化部署流程，加快新客户站点上线。

针对 Dashi 页面数据加载与计算负担问题，优化前后端数据处理流程，减少页面端重复计算，将首页渲染所需时间从2分钟降低至20秒。定位性能瓶颈，调整数据结构与存储逻辑，并支持设计师分析用户行为。

优化 Office Shift Pro 自动化建筑平面生成工具，提高居住平面方案生成效率；重构核心贪心算法流程，调整局部搜索与结果评估逻辑，降低无效计算。

主导开发内部数据可视化图表库，为项目提供可复用的动态图表、Tooltip 与数据展示组件；根据火焰图，优化地图加载速度。统一数据结构并优化渲染缓存，减少重复计算。

落地内部 UI 设计系统重构，支持跨项目复用组件样式与设计规范；中心化设计 Token，完善样式与类型输出，并支持版本迭代与包发布流程。

开发 Rhino / CAD 自动化数据处理脚本，支持城市规划团队快速生成点云文件并批量标注几何属性；将 CSV 数据转换为 DWG 点云，并为 CAD 几何对象写入属性信息。

参数化设计师

华东建筑设计研究院

2020.08 - 2021.05 / 上海 / 实习

参与华东院国际设计中心大型公共建筑室内设计工作，负责核心公共空间的空间形态推敲、方案表达与汇报材料整理。

使用参数化建模工具与 Python 脚本进行曲面建模和方案迭代，并输出渲染图、分析图与汇报文本。

学术项目

简历 Bro

基于本地部署的 Qwen2.5-Coder 7B，构建面向简历改写、排版优化、视觉美化与多语言转换的开源 AI Agent。采用 Plan-and-Execute 分阶段 LLM 编排，将用户指令拆解为意图识别、上下文选择、Patch 生成、规则校验与失败修复，提升 AI DOM 编辑的稳定性与可观测性。集成 Web UI、本地日志、用户状态存储和案例文件 RAG 检索，支持快速迭代并导出 PDF 简历。

源代码

基于动力学的空间找形设计

基于点云动力学模拟实现空间找形的开源客户端软件，并用 CUDA C++、Raylib 与 WASM 完成可视化和 Web Demo 部署。

在线演示 源代码

美国宇航局月球车竞赛

为 NASA HoloLens 竞赛项目开发宇航员 UI，使用 Unity / C# 实现采样、地图引导与定位功能。

Profile

Graduated in Architecture from Tongji University, continued design studies at Rhode Island School of Design, and completed computer science coursework at Brown University. During school, explored cross-disciplinary work across human-computer interaction, computational design, and physics-based simulation, earning strong academic results and multiple awards. Currently works on Sasaki's Boston R&D team as a software engineer, focusing on web frontend and backend architecture, data structures, and algorithmic optimization. Self-driven, detail-oriented, patient in communication, and trusted by colleagues and collaborators.

Education

Rhode Island School of Design

Master of Design RI,USA

2021.07 - 2023.06

Brown University

Computer Science cross-registration RI,USA

Tongji University

B.Arch, Deutschintensivkurs Shanghai,China

2014.09 - 2020.06

Qibao High School

High School Shanghai, China

2011.09 - 2014.06

Skills

AI Eng

Job Experience

Software Engineer

Sasaki Associates, Inc.

2023.11 - 2025.11 Boston Full-time / 2026.1 - Present Remote

Delivered client data integration, site configuration, and cloud-backed service modules for the Dashi multi-client website platform, evolving the original static frontend into a reusable full-stack application; improved package maintenance and deployment automation to speed up new client-site launches.

Improved Dashi's frontend and backend data flow to address page-loading and client-side computation issues; identified performance bottlenecks, adjusted data structures and storage logic, and supported user behavior analysis.

Improved Office Shift Pro, an automated floor-plan generation tool, to generate office layout options more efficiently. Refactored the core greedy-algorithm workflow, local search logic, and result-evaluation steps to reduce unnecessary computation.

Led development of an internal data-visualization chart library with reusable animated charts, tooltips, and data-display components; standardized data models and optimized rendering cache behavior to reduce repeated computation.

Delivered an internal UI design-system refactor to support reusable component styling and design standards across projects; centralized design tokens, improved style and type outputs, and supported versioning and package-release workflows.

Developed Rhino/CAD automation scripts to help urban planning teams generate point-cloud files and batch-annotate geometry attributes; converted CSV data into DWG point clouds and wrote metadata onto CAD geometry.

Computational Designer

East China Architecture Design and Research Institute

2020.08 - 2021.05 / Shanghai / Intern

Contributed to large-scale public-building interior design at ECADI's International Design Center, supporting spatial design studies, design communication, and presentation materials for key public spaces.

Used parametric modeling tools and Python scripts for surface modeling and design iteration, producing renderings, diagrams, and presentation materials.

Academic Projects

Resume Bro

Built an open-source AI agent for resume rewriting, layout refinement, visual polish, and multilingual conversion, powered by a locally deployed Qwen2.5-Coder 7B model and a CrewAI-inspired multi-agent architecture. It provides a Web UI, local logging, user-state persistence, case-file RAG retrieval, and PDF resume export for fast iteration.

Source Code

Physics-Based Form-Finding

Built a point-cloud form-finding simulation with CUDA C++, Raylib, and a WASM web demo.

Live Demo Source Code

NASA Rover Challenge

Built astronaut UI features for a NASA HoloLens project in Unity/C#, including sampling, map guidance, and positioning.
